Optum 360

Project Title	IBS - Coding Solutions
LOCATION	Chennai, India
DURATION	Apr /2016 – Aug/2017
TEAM SIZE	10
ROLE	Tech Lead
Tech stack	Java, JSP, Struts, JBOSS, RESTful web services , Oracle 11g, JBoss Dev studio7 & 9, ANT, Jenkins, Maven, AnthilPro, Sonar, Fortify

PROJECT DESCRIPTION:

Optum360® Coding Solutions is an organization dedicated to transforming the registration, documentation, billing, and payment system so it works better for hospitals, health systems and other care providers, and delivers a better patient experience. It serves more than 300 commercial

and public health plans, and its deep payer operations expertise will be applied to making administrative processes between payers and providers more direct, faster, and simpler. It is to provide solutions for coding, billing and reimbursement practices which helps to save time and increase efficiency with accurate and on-time content

Coding solutions programs provides online access to a powerful search application for all CPT, HCPCS & ICD code sets and guidelines to ensure coding accuracy improve billing performance and reduce rejected claims. It offers Compliance check on a batch of claims and error reports for claims repair prior to submittal to a claims payer.

IBS-EDICapability

Project Title	Optum Transaction Testing Services
LOCATION	Chennai, India
DURATION	Jan/2010 – Mar/2016
TEAM SIZE	6
ROLE	Scrum Master/Project Lead
Tech stack	LAMP, Java, J2EE, JSF, Spring, MySQL, XHTML, RichFaces, PrimeFaces

PROJECT DESCRIPTION:

Optum's Transaction Testing Service formerly Claredi® Classic is an interactive, Web-based solution that enables you to check your X12 transactions for compliance with HIPAA regulations and payer rules. When files are submitted for outbound testing, you will receive a complete analysis of your results, with color-coded HIPAA errors, business errors and warnings as well as the test results for all seven levels outlined by WEDI-SNIP. Once your file has passed without any HIPAA errors, Optum Transaction Testing Service can certify your capabilities, transaction by transaction. OptumTM Transaction Testing Service identifies compliance issues and errors not only during testing but as part of the daily production process. Built specifically for health care EDI, ICD-10 and HIPAA validation, it's the definitive tool to help you achieve HIPAA and new code transaction compliance.

Test and certify your transactions quickly and easily while keeping your EDI moving smoothly between trading partners. For provider groups, hospitals, software vendors and other organizations who are coding ICD-9 and preparing for ICD-10, identifying and correcting compliance issues and errors – before sending transactions on to clearinghouses and payers – is critical to improving financial performance and quality. These compliance issues must be identified prior to loading data

into back-end systems, and routing responses and corresponding transactions back to the submitter.

Key benefits at a glance:

- Test and validate ICD-9 + ICD-10 codes to ensure existing and new code compatibility.
- Validate for HIPAA compliance, and payer companion guide edits.
- Help ensure clean claims with less manual work - at the least costly point in the claims continuum - before submitting to your clearinghouse.
- Direct clean transactions to your clearinghouse, while identifying and separating those with errors, all while validating to WEDI type 1-7, against more than 500 payer companion guides, and accommodating the expanded ICD-10 code sets.
- Get detailed submitter reporting for quality improvement, and track and reconcile to eliminate "black holes."
- identified prior to loading data into back-end systems, and routing responses and corresponding transactions back to the submitter.
